

Can you answer the following questions about students and young adults in your state using your own longitudinal data? This free diagnostic toolkit will kickstart your capacity to have this information at your fingertips.

Is your state on track to meet its education attainment goals?

- Which state high school graduates are earning postsecondary credentials?
- Are some students more likely to earn certain postsecondary credentials than others?

Examine patterns in degree completion using your longitudinal data to establish a foundational understanding of students' educational outcomes after they graduate high school.

Who needs support enrolling in college?

- How many high school graduates go to college? Where and when do they enroll?
- Are some students more likely to enter postsecondary pathways than others?

Understand roadblocks to enrollment to deepen insights about college stop-out behavior.

Who needs additional support making it through college?

- Which state high school graduates stop out of college? Which students are more likely to stop out than others?
- What are the re-enrollment behaviors of college stop-outs?

Unpack the drivers of credential completion rates in your state to help identify the students in need of support during the transition from high school to college.

Who earns a livable wage?

- How do earnings vary by educational attainment and student characteristics?

Provide decisionmakers with critical information about which educational pathways provide livable wages and for whom.
